

## **infinias Access Control 6.2 Server-based Release Notes**

### **3xLOGIC VIDEO INTEGRATION**

infinias hosted server software now offers seamless integration with 3xLOGIC VIGIL Video Appliances. Infinias now supports VIGIL video camera associations so that a user can view live or playback video for a specific access control event or view live video for a specific door. Users can also change video resolution, take a snapshot, and search playback video for any event.

### **INFINIAS ACCESS CONTROL MOBILE APP**

infinias hosted server software now supports the Site Access mobile for viewing video and limited management and monitoring of events, doors and people.

- Includes the ability to Set and clear Scope/Site.
- View events in real-time
- Perform Event History Search
- View live and playback video from a camera associated with a door by door event
- Suspend people who are currently active
- Momentarily Unlock Doors
- View live video from a camera associated with a door
- Set auto-refresh interval
- Includes support for customer branding
- Setup eIDC<sup>32</sup> door controllers and associated 3xLOGIC VIGIL Video Appliances
- Receive Push Notifications and review previous notifications that occurred within 6 months

### **ENHANCED TECHNICAL SUPPORT FEATURES**

infinias customer hosted server software now supports Casengo chat link. Access a direct line to 3xLOGIC Technical Support in either the Home or Configuration sections of infinias.

### **CORE HOSTED SERVER SOFTWARE FEATURES AND UPDATES**

- Added Event History Search
- Upload Report, allows user to import a report into infinias
- Added the ability to show date/time of last successful communication in Door Device view
- About link provides infinias version information in all views
- Added the ability to upload a theme specific to a Customer.
- Added the ability to show customer specific information (contact details) in the About dialog.
- Added the ability to retrieve a customer's logo via REST API
- Added the ability to retrieve a customer's logo via Mobile Credential and Site Access API. This allows for the customers logo to display in the mobile apps.
- Text search added to People API

### **ENHANCEMENTS**

- Set retry intervals on controller to reduce offline time (Change ID: 21178)
- Add zone option when editing user so integrator can get people into correct zone (Change ID: 20870)
- Add paging to customers view (Change ID: 21674)
- Allow Admin to collapse scope tree (Change ID: 22563)
- Improved People search performance. The text now has to match from the left. Example: When searching for 'Smith', 'ith' will not match, the search must include the left text, such as 'Smi'
- Improved Event History search performance
- General performance improvements

**MAINTENANCE UPDATES**

- Fixes holiday time sent to hosted eIDC<sup>32</sup> (Change ID: 22458)
- Customer view does not page (Change ID: 21674)
- Error when clicking About as Supervisor user (Change ID: 21295)
- Unused Wiegand formats are now removed from hosted eIDC<sup>32</sup> (Change ID: 20628)
- Door time no longer drifts from server time (Change ID: 21309)
- Fixes Active Directory sync (non infinias cloud deployments) (Change ID: 22225)
- Allow Supervisor and HR users to get About info (Change ID: 21295)
- Fixes operation in new time zones, e.g. Haiti (Change ID: 22571)

**NEW DISCOVERY TOOL FEATURE**

- Added the ability to modify eIDC<sup>32</sup> Hosted Configuration for multiple controllers at once
- Added the ability to test Hosted connection

**INFINIAS MOBILE CREDENTIAL APP**

- Added support for customer branding

**MAINTENANCE UPDATES**

- Added Re-register option, which when selected, requires that the user add a new Activation Key
- Added new logo icon and updated naming of the app underneath the icon (Credential)
