

infinias Mobile Credential Access Control

infinias Mobile Credential provides convenient access control, allowing authorized users to request access to doors from their iPhone or Android phone – with the touch of a button.

Key Benefits

- **Convenience** – Request access to the doors at your facility with a touch of your phone. Mobile Credential is iOS and Android compatible and allows authorized users access to designated doors.
- **Increased security** – If a phone goes missing, the phone owner usually notices right away, unlike a card or fob that could go unnoticed or unreported for days. Phones are also less likely to be shared. Using a smartphone as a credential provides an increased layer of security by allowing users in a corporate setting to capitalize on their corporate mobile device policies to require authenticated device unlock by pin, gesture or biometric, effectively adding multi-factor authentication to Mobile Credential.
- **Log of events** – Intelli-M® Access software provides a record of each access control event and transaction, documenting each time a user's mobile phone is presented for use.
- **Simplified credentials management** – If a phone is lost or an employee is terminated the credential can immediately and easily be deactivated to prevent unauthorized access.
