

## 4 or 8 Channel Smart HD Video Security System with 2TB HD

Protect your business with the power of 3xLOGIC. Featuring 4 or 8 bullet or dome style cameras, clear high definition video ensures you'll never miss out on important details. Superior video surveillance has never been so easy to achieve at such an affordable price!

### SYSTEM FEATURES

#### High Definition Video

3xLOGIC Small Business System cameras provide full 1080p video for smooth, clear playback of recorded footage, allowing you to capture far greater detail than lower resolution cameras.

#### Wide Field-of-View (FoV) Coverage

3xLOGIC cameras provide an 85° FoV (twice that of the standard 42° FoV of most cameras) with picture perfect 16:9 wide-screen viewing. This expanded view offers a better picture while monitoring larger and distant areas with ease.

#### Anytime, Anywhere Viewing with 3xLOGIC's Free Mobile App

Watch your business from anywhere in the world on your smart device with 3xLOGIC's View Lite II app (iPhone®/ iPad®/Android™). Whether you're stepping out for a bank deposit or finally taking that vacation you've been planning all year, 3xLOGIC has you covered and keeps you connected.

The View Lite II mobile app allows you to quickly and easily playback video from multiple cameras in one screen. View Lite II allows users to create "views" (custom layouts of cameras) and view multiple cameras from an unlimited number of locations directly from a smart device or PC. For example, a business owner can view cash register activity in all four checkout lanes of their store(s) on one screen. View Lite II enables you to monitor your cameras simultaneously, without switching apps or devices.

#### Motion-Activated Recording with Push Notifications

Don't want to spend your nights monitoring a closed store? No problem. 3xLOGIC's NVR provides the ability to record on motion. You can even set the motion detection "zone" of each individual camera to monitor certain areas. Receive a push notification directly to your smart device when motion is detected in the selected zone.

#### Weather-Resistant Indoor/Outdoor IR Cameras

3xLOGIC cameras are equipped for low-light vision up to 98 feet, and include auto IR cut filter sensors that produce a clear and crisp image day or night. 3xLOGIC cameras are designed for both indoor and outdoor use. Bad weather is never an issue for 3xLOGIC bullet and dome style cameras which are rated IP66 weather-resistant and can withstand conditions such as rain, sleet and snow.

#### Event/Tampering Alerts

The 3xLOGIC NVR system protects you from intrusion and vandalism by providing tamper alerts if anyone attempts to change any of the camera positions, block a camera view or cut cabling without your knowledge. Push notifications are sent directly to your smart device or PC.

#### Large Storage Capacity and Easy Video Review

The 3xLOGIC V250 NVR comes with a 2TB hard drive allowing you to store days of video. The NVR utilizes both H.264 and proprietary compression and capture technologies which allows you to record even longer. Each camera can be set to record constantly or customized to record based on motion activation or at scheduled times. Searching and reviewing your video is made easy with the option of searching by time or by event.

If your needs change, you can always expand the system to up to 6TB's of storage. 3xLOGIC NVR hard drives provide fast read/write times and reliable recording of your video security footage.

### SYSTEM SPECIFICATIONS

<b>Channels:</b>	4 (V250-4-SMBK-4B) or (V250-4-SMDK-4D) 8 (V250-8-SMBK-4B4D), (V250-8-SMBK-8B) or (V250-8-SMBK-8D)
